

Move from AI Pilots to Real Impact

Most companies are experimenting with AI. Very few are turning it into a consistent, measurable value.

That's because AI transformation is not just a technology challenge. It's a leadership, workforce, and operational challenge.

The partnership between the AI Navigator Collective and Walsh University combines AI transformation expertise with academic rigor, workforce-development experience, and scalable leadership education to help companies move from experimentation to operational capability through:

- A structured, real-world pathway for AI transformation inside your company
- Executive education, workforce-aligned training, and formal AI leadership development
- A peer community of organizations navigating AI adoption together
- Practical implementation support-focused tailored to your workflows, organizational capability, and business outcomes

The companies that succeed with AI aren't the ones experimenting with the most tools—they're the ones that build the internal capability to identify where AI creates value, implement it effectively, and adapt as the technology evolves.

Build and develop internal AI leadership capability:

- The AI Navigator Collective and Walsh University work together to help your company move from AI experimentation to operational execution through internal AI Navigators, implementation guidance, governance support, workflow integration, peer learning, and formal Chief AI Officer leadership education and university-backed certification.

What Changes for Your Company:

- Clear AI priorities tied to business strategy—so your leadership team knows where to focus
- A defined roadmap, governance approach, and trained internal AI leaders—bringing structure, confidence, and accountability
- AI embedded into real workflows and operations—moving beyond pilots into how work actually gets done
- Measurable ROI, efficiency gains, and workforce capability growth—so progress is visible, not assumed
- Formally trained and certified internal AI leadership capability—so your company can sustain momentum long after implementation begins

This Is a Strong Fit If:

- You know AI will reshape your workforce and operations over the next several years
- You want practical implementation and leadership development—not just another AI training program
- You want to formally develop internal AI leadership capability—not outsource decision-making or strategy

For more information on how you can build AI Capability inside of your organization, email Heather Lenz, Founder, AI Navigator Collective at heather@ainavigatorcollective.com, or Dan Passerini, Executive Director of Cross-Enterprise Operations, at dpasserini@walsh.edu.
